Liberty Mutual is fueling the climate crisis!

Liberty Mutual is a major insurer of the coal, oil, and gas projects that are destroying our planet. Without this insurance, fossil fuel projects couldn't be built or operated.

Despite its so-called 'sustainability policy', Liberty Mutual still insures new coal projects around the world, and has no stated plans to rule out insuring oil and gas such as tar sands and Arctic drilling.

Liberty insures projects that are catastrophic for the environment and Indigenous rights, like the Trans Mountain tar sands pipeline in Canada. It's even the sole owner of a proposed coal mine in Australia. Liberty also invests billions of dollars of customer premiums into fossil fuels companies.

At the same time, Liberty Mutual is abandoning homeowners in wildfire-prone California, all while enabling the fossil fuels that are contributing to the conditions for record-breaking fires.

If Liberty Mutual wants to attract the best and brightest, it will have to show us that it's serious about tackling the climate crisis.

Liberty Mutual: time to get serious on climate change. Stop insuring climate destruction, and instead insure our future!

LibertysClimateCrisis.com

AIG is among the worst of the worst on climate change.

AIG is one of the top three insurers of the coal, oil, and gas industries that are destroying our planet. Without AIG's insurance, fossil fuel projects couldn't be built or operated.

Only a few insurers in the world can take on new multibillion dollar coal projects. AIG is one of them. And while the coal industry may need AIG, AIG doesn't need coal: coal accounted for less than 1% of AIG's 2019 premiums. So why is the company still insuring dirty coal?

AIG is also a leading insurer of oil and gas projects that are driving the climate crisis and violating Indigenous rights. For example, AIG insures the controversial Trans Mountain tar sands pipeline in Canada, which has already had 85 spills and is opposed by many First Nations communities.

If AIG wants to attract the best and brightest, it will have to show us that it's serious about tackling the climate crisis.

AIG: It's time to get serious about climate change. Stop insuring climate destruction, and instead insure our future!

The Chubb logo consists of the word "CHUBB" in a white, bold, sans-serif font, centered within a solid black rectangular background.

CHUBB®

Chubb is not walking its talk on climate change.

Chubb is one of the largest property and casualty insurance companies in the world and is a major insurance provider for oil and gas projects and companies that are destroying our planet. Without Chubb's insurance, these dirty and harmful projects couldn't be built or operated. For example, Chubb insures the controversial Trans Mountain tar sands pipeline in Canada, which local Indigenous groups adamantly oppose.

Meanwhile, Chubb's CEO Evan Greenberg talks publicly about how important it is for everyone, including corporations, to take urgent action on climate change. Mr. Greenberg should take his own advice and move Chubb into a climate leadership position by ending the company's insurance coverage for oil and gas.

If Chubb wants to attract the best and brightest, it will have to show us that it's serious about tackling the climate crisis.

Chubb: Stop insuring climate destruction, and instead insure our future!

A solid orange horizontal bar is located at the bottom right corner of the page.

Why is Travelers providing insurance for fossil fuel projects that are driving the climate crisis and threatening our future?

Among 30 global insurance companies that environmental advocates compared, Travelers is one of only four that hasn't taken a single step to end its involvement with fossil fuels.

The company insures companies building oil pipelines, and fracking wells around the world. In fact, Travelers is one of the top five insurers for oil and gas worldwide. Without this insurance, none of these projects could be built or operated.

Supporting the fossil fuels that are causing climate change doesn't even make financial sense: Travelers recorded a record US\$1.3 billion in losses from natural disasters made worse by climate change in 2018.

If Travelers wants to attract the best and brightest, it will have to show us that it's serious about tackling the climate crisis.

Travelers: It's time to get serious about climate change. Stop insuring climate destruction, and instead insure our future!

The Hartford could be a climate leader among insurance companies. Instead, it's supporting fossil fuels that are driving climate destruction.

In 2019, The Hartford took a first step: it limited its involvement with dirty tar sands and coal. But its sustainability policy is full of loopholes – most importantly, it still allows The Hartford to insure new coal mines and pipelines that our planet cannot afford if we are to avoid catastrophic warming.

And The Hartford has no stated plans to end its involvement with oil and gas other than tar sands.

If The Hartford wants to attract the best and brightest, it will have to show us that it's serious about tackling the climate crisis.

It's time for The Hartford to be a climate leader: Stop insuring climate destruction, and instead insure our future!

Insurance companies are supposed to be society's risk managers. Instead, they're enabling the biggest risk of all: climate change.

The industries fueling the climate crisis—coal, oil, and gas—can't operate without insurance.

And while most insurers outside the US are ending or limiting their insurance coverage and investments in fossil fuels, most US insurers are still insuring new coal projects around the world. And not a single US insurer has a policy ruling out insurance for oil and gas.

US insurers are enabling projects that devastate our environment and violate Indigenous rights, like the controversial Trans Mountain pipeline in Canada.

It's time for US insurance companies to get serious on climate: Stop insuring climate destruction, and instead insure our future!
